Python Software Development | Machine Learning | Data Science | Data Automation

Professional Summary

Computer Science undergraduate with hands-on experience at Sopra Steria and KPMG India. Proven ability to build end-to-end data pipelines, deploy ML models, and generate actionable insights using Python, FastAPI, and modern data tools, with interest in large-scale data processing, machine learning, and time-series forecasting.

Technical Skills

- **Programming:** Python, SQL, JavaScript, TypeScript, C++
- **Machine Learning and Data Science:** scikit-learn, XGBoost, LightGBM, CatBoost, Prophet, AutoARIMA, Feature Engineering
- **Deep Learning, NLP and CV:** PyTorch, TensorFlow, Keras, Hugging Face, YOLOv8, DeepLabV3+
- **Data and Backend Tools:** Pandas, PostgreSQL, MySQL, MongoDB, FastAPI, Streamlit, REST APIs, AWS
- **Visualization and Tools:** Power BI, Tableau, Plotly, Seaborn, ServiceNow, Git/GitHub, Microsoft 365

Internship Experience

Sopra Steria

Jul 2025 – Nov 2025

Data Science Intern

- Built an automated case-sampling tool that helped teams select the right records from a 12M-row dataset, reducing analyst preparation time from 4–5 hours to under 30 minutes.
- Created flexible quota-balancing workflows using Python and Pandas, improving consistency and reducing repeated manual work.
- Developed a Streamlit interface for validation, reporting, and stakeholder review, and proposed a PySpark migration path for future distributed processing.

KPMG India

Dec 2024 – Feb 2025

Technology Analyst Intern

- Built a forecasting model to predict crop yield trends, achieving $R^2 = 0.78$ and 22% lower RMSE compared to ARIMA baselines.
- Created a data pipeline using MongoDB and Pandas to organize location-based agricultural data for analysis and visualization.
- Cleaned, prepared, and evaluated datasets to support reliable forecasting workflows.

Projects

AgriFore: Crop Price Forecasting Platform

Feb 2025 – Apr 2025

Research Project – GitHub Link

- Built a crop price forecasting and analytics platform that combines market, production, and weather data to study district-level agricultural trends.
- Developed forecasting workflows using XGBoost and Prophet, with FastAPI and Streamlit used for backend services and user-facing dashboards.
- Added an AI-assisted query layer so users could ask questions about model outputs instead of manually searching through dashboards and reports.

CSV Forecast Engine

Dec 2024 – Jan 2025

GitHub Link

- Built a no-code forecasting tool that allows users to upload CSV files and generate predictions without writing code.
- Used Prophet and AutoARIMA with validation, preprocessing, and backtesting to make the tool reusable across different datasets.
- Designed the project as a repeatable analysis workflow rather than a one-time forecasting script.

LoanOne: Multilingual Loan Advisor

Nov 2024

Standard Chartered Hackathon Finalist – Top 5

- Built a multilingual loan advisory system that helped users check eligibility and understand suitable loan options.
- Combined LightGBM, FastAPI, React, and an interactive advisory layer to connect model results with .

Education

SRM Institute of Science and Technology

Aug 2022 – May 2026

B.Tech in Computer Science and Engineering

CGPA: 8.18

Certifications

AWS ML Foundations, ServiceNow Certified System Administrator, ServiceNow Certified Application Developer, ML On-ramp, Deep Learning, Computer Vision Essentials, GitHub Foundations

Activities and Achievements

Leadership: MUN Society Council Affairs – Committee Head, Directorate of Student Affairs – Discipline | **Volunteering:** Good Life Center

Achievements: Standard Chartered Hackathon Top-5 Finalist, Smart India Hackathon Participant
